Airplane Display Stands

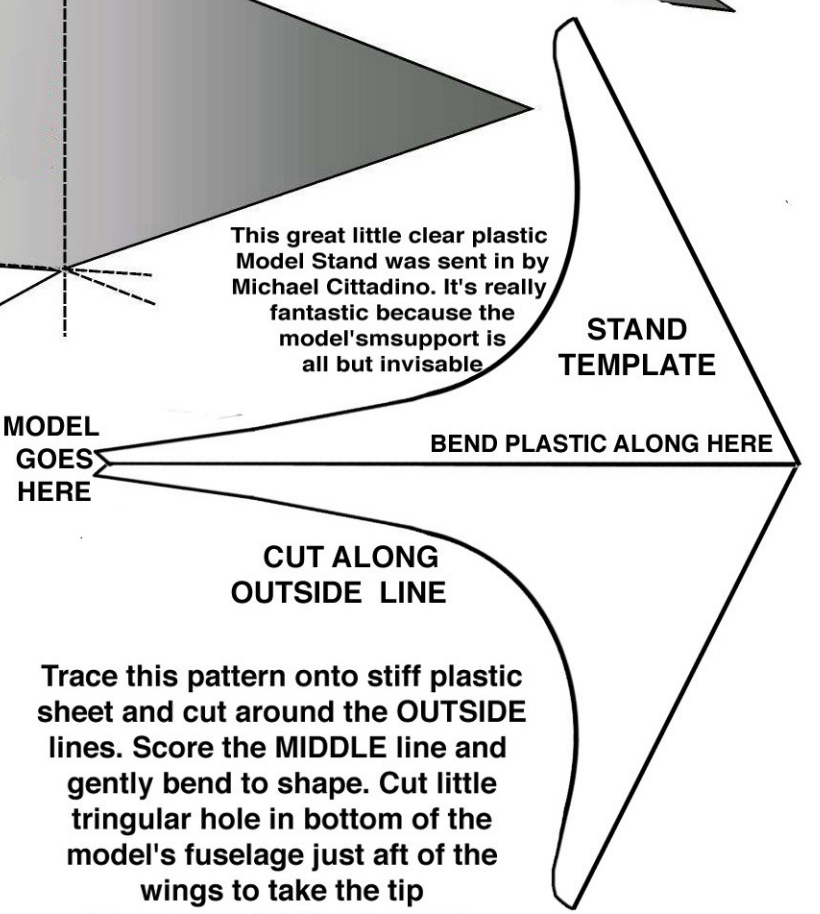

SEE COLLECTION OF LOGOS AT:
www.fiddlersgreen.net

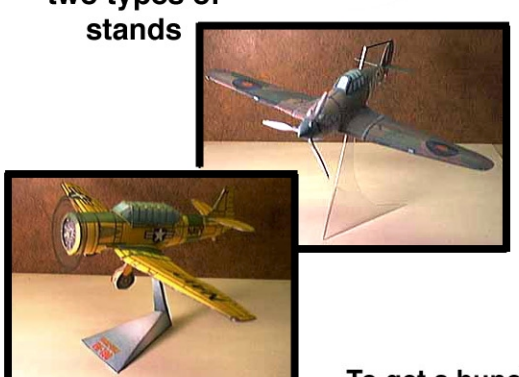

This great little clear plastic Model Stand was sent in by Michael Cittadino. It's really fantastic because the model'smsupport is all but invisable

This Green Fiend Button was also designed by Tim and we think it's pretty darn neat!

Showing the two types of stands

Trace this pattern onto stiff plastic sheet and cut around the OUTSIDE lines. Score the MIDDLE line and gently bend to shape. Cut little tringular hole in bottom of the model's fuselage just aft of the wings to take the tip of the stand. A little glue at the joining would be nice

To get a bunch of neat company logos go to http://www.fiddlersgreen.net/wsam.htm/logos.htm/logo_menu.htm. Print, then cut to mount on stands. Cool
